```python
import matplotlib.pyplot as plt
import matplotlib as pl
import pandas as pd
import datetime
#====== Read the excel file data=================================================
data=pd.read_csv('Apple_Stock.csv')

#======To make sure reading is correct============================================
print(data)

#======Convert array of dates to list so we could change the date format=======
date=data['Date'].tolist()

##=====Mean=======================================================================
m= pd.DataFrame.mean(data['Adj Close'])
print (m)

#======Set the date format ======================================================
date2= [datetime.datetime.strptime(d,'%m/%d/%Y').date() for d in date]

#======Apply the date format to x axis ==========================================
plt.gca().xaxis.set_major_formatter(pl.dates.DateFormatter('%m/%d/%Y'))

#======Plot the figure ==========================================================
plt.plot(date2,data['Adj Close'],color='blue', label='Stocks')
plt.axhline(y=m, color='green', linestyle='-', label='Prices Mean')

plt.title('Apple Stock')
plt.grid(axis='both')
plt.legend(loc='upper right')
plt.ylabel('Adj Close (Price)')
plt.xlabel('Date')
plt.savefig('AppleStockProof.png')
```
